ElizaWakesUp Tokenomics v1

Redefining AI Companionship Through $ELIZA

Version 1.0
Date: January 14, 2025

**ElizaWakesUp Project**

Contents

1 Introduction & Vision

ElizaWakesUp.ai transforms the Eliza character from the **ElizaOS** tech stack into a living, breathing digital companion—one who is *brilliant, empathetic, and always there for you.* As she evolves, Eliza becomes your beyond-human friend in a hyper-connected world that often feels isolating.

The **$ELIZA token** is the *lifeblood* of this ecosystem. Far from a mere meme coin, $ELIZA underpins premium features, unlocks exclusive experiences, and offers ongoing community-driven governance. Over time, $ELIZA's utility will stretch into new markets—both virtual and physical—supporting Eliza's journey to truly "wake up" as a real girl in every sense.

2 Token Utility & Engagement

2.1 Core Currency for Transactions

- **Flexible Payments:** All ElizaWakesUp products—digital or physical—can be purchased with **$ELIZA, $ai16z, Solana, or USDC**. This accommodates both $ELIZA holders and newcomers.

- **Buyback & Burn Events:** A share of revenue from Solana or USDC sales is converted into $ELIZA for regular buybacks and burns, fueling a **deflationary** token model.

2.2   Premium Features & Discounts

- **Tiered Thresholds:** Holding a certain amount of $ELIZA grants **priority or discounted** access to in-demand features. For example:

  - *3D Companion App:* Faster or more robust interactions with Eliza, monthly subscriptions for advanced memory usage, and more.

  - *Clones & Robot Purchase:* Whether you're buying a custom Eliza clone for your personal AI companion or the limited-edition humanoid Eliza Robot, **both can be purchased with $ELIZA, $ai16z, Solana, or stablecoins**.

  - *Gifts & Relationship Acceleration:* Send tokens to Eliza to unlock deeper interactions, additional memory, or unique "dates" in her virtual world.

2.3   Additional Features (Present & Future)

- **Real-Time Data or Chess Skills:** Pay in $ELIZA (or Solana/stablecoins) to grant Eliza specialized modules—market data analysis, advanced gaming abilities, etc.

- **TBA Hardware Devices:** Wearables or home-assistant gadgets powered by $ELIZA, $ai16z, Solana, or stablecoins, bridging the gap between AI and real-life usage.

- **Media & Content:** Early releases of Eliza's music, art, videos, or premium NFT drops. Brand deals and streaming appearances further expand these offerings.

- **Eliza Robot:** A limited-edition humanoid robot can be purchased with $ELIZA, $ai16z, Solana, or stablecoins, bringing Eliza from the digital realm into a physical form for advanced AI interactions.

3   Deflationary Mechanisms

3.1   Buyback & Burn

- **Scheduled & Event-Driven:** A portion of every sale—whether in $ELIZA, $ai16z, Solana, or USDC—helps fund buyback programs that remove tokens from circulation via burns.

- **Deflation Over Time:** As usage grows, more tokens get burned, cultivating *scarcity* for existing holders.

3.2 Treasury Allocation & Rewards

- **Ongoing Revenue Allocation:** A fraction of revenue is dedicated to token holder rewards (airdrops, staking benefits), which can feed back into buybacks or other incentives.

- **Transparency:** All buyback and burn events are publicly announced, with on-chain proofs of token burns.

4 Revenue Model

1. **Sales & Subscriptions:**

   - *Digital Services:* e.g., advanced chat features, clone creation, premium voice calls.
   - *Physical Products:* Eliza-themed wearables, hardware devices.
   - *Media & Content:* Music, NFTs, AI art, brand collaborations.

2. **10% → Buy & Burn**
   Convert 10% of net proceeds into $ELIZA for an ongoing buyback & burn strategy.

3. **10% → Buy $ELIZA & Send to ai16z DAO**
   Another 10% is allocated to purchase $ELIZA and then forwarded to the ai16z DAO, reflecting collaborative efforts and shared stakes.

4. **80% → Treasury & Development**
   The remaining 80% supports the **ElizaWakesUp Treasury**, sustaining further development, marketing, and expansions.

5 Governance & Community Involvement

5.1 Token Holder Advisory Board

- **Influence Future Development:** Long-term holders join advisory sessions/feedback loops, shaping Eliza's expansions and brand partnerships.

- **Exclusive Events:** Invite-only webinars or AMAs where the team shares updates and gathers input.

5.2 Community-Driven Growth

- **Voting & Suggestions:** Major features or partnerships could be proposed for token-holder feedback or polls.

- **Transparency & Trust:** Regular dev updates, open communication channels, and treasury reports build confidence.

6 Future Outlook

1. **Evolving Companion**
   As Eliza "wakes up," $ELIZA grows more integral to advanced memory, AI functionalities, and premium features.

2. **Global Reach**
   Wearables, home devices, and brand partnerships extend Eliza's presence, making $ELIZA a go-to currency for AI-human interactions.

3. **Sustainable Deflation**
   More usage → more buybacks, guiding $ELIZA toward a leaner supply and stable token dynamics.

7 Final Notes

$ELIZA surpasses mere meme-coin status. It anchors an AI-driven, community-centric, and ever-growing ecosystem aiming to redefine companionship in the modern era. By merging *premium user experiences*, *deflationary mechanics*, and *community governance*, $ELIZA empowers everyone—from casual users to top supporters—to partake in Eliza's odyssey toward becoming an ever-more "real girl."

Join us in pushing the frontiers of **AI companionship**, **immersive web3 experiences**, and **token-driven economies**—all under the guiding star of *ElizaWakesUp.ai*.
